Summary

AI student and Python developer who builds machine-learning apps end to end, from data preparation to evaluation and a live web app. Looking for an entry-level Python, backend or AI engineering role, or an internship.

Skills

Languages: Python, SQL (SQLite), JavaScript, Java (basic), C++ (coursework)
Machine learning: scikit-learn, TensorFlow, Keras, pandas, NumPy, Matplotlib; ensembles, gradient boosting, CNNs
AI and LLMs: OpenAI API, multi-agent orchestration, LLM tool calling, prompt engineering, custom GPTs
Backend and web: Flask, REST/JSON APIs, SQLite, Git, GitHub, Vercel, Render; React and Next.js (learning)

Projects

Raahi — Multi-agent AI trip planner for Northern Pakistan

Python, LLM APIs, JavaScript **north-kappa-ivory.vercel.app** **github.com/Qamar7071/Agent**

- Built a master orchestrator that sends each request only to the specialist agents it needs (itinerary, weather, route, budget, stays, safety, packing) and runs independent agents in parallel.
- Gave the chat agent 12 server-side tools and an optional backup LLM provider (OpenAI, Groq or Gemini); plans are stress-tested with what-if scenarios before changes are accepted.

KKH Road Status — Blockage-risk forecasts for the Karakoram Highway

Python, scikit-learn **kkh-road-status.vercel.app** **github.com/Qamar7071/KKH-Road-Status**

- Trained a calibrated gradient-boosting model with monotonic constraints that forecasts next-day blockage risk for 8 segments, Havelian to Khunjerab; the same trees run in the browser for a what-if simulator.
- ROC-AUC 0.944 and PR-AUC 0.347 (about 14× chance) on a simulated bootstrap dataset, ahead of logistic-regression (0.928) and season-only (0.717) baselines.

Diabetes Risk Assessment — Clinical screening web app

Flask, scikit-learn **diabetes-prediction-app-rho.vercel.app** **Code**

- Compared Logistic Regression, Random Forest and Gradient Boosting on the Pima dataset (768 records); the best reaches 77.92% test accuracy and is served by a Flask JSON API behind a risk-gauge UI.

USWA AI Assistant — Knowledge-base school chatbot

Flask, OpenAI API, SQLite **uswa-ai-assistant-2.onrender.com** **Code**

- Scoped chatbot that answers admissions, fees, timings and holiday questions for a Gilgit-Baltistan school, with chat history in SQLite and an admin dashboard.

More ML apps — GPA predictor, LoanCheck, UniPredict

Flask, scikit-learn **GPA** **LoanCheck** **UniPredict code**

- Linear Regression GPA predictor (R^2 0.608, RMSE 0.247), Logistic Regression loan-eligibility prototype (84% accuracy, ROC-AUC 0.93) and a two-model admission predictor for 20+ universities (~87.8% accuracy), all on synthetic data.

Experience

Freelance Python & ML Developer — Fiverr, Remote — 2024 – Present

- Deliver Python data analysis, machine-learning models and prompt engineering for clients, including custom ChatGPT prompt systems for real-estate professionals and data-science projects for startups and students.

Education

BS Artificial Intelligence — 2024 – Present

Shifa Tameer-e-Millat University, Islamabad
Grade A, 4th semester. Coursework: linear algebra, algorithms in C++, AI fundamentals.

Languages

English (professional), Urdu (native)

Certifications

Supervised Machine Learning: Regression and Classification
DeepLearning.AI and Stanford Online, Coursera, Oct 2026. **Verify**

OpenAI GPTs: Creating Your Own Custom AI Assistants
Vanderbilt University, Coursera, Oct 2026. **Verify**

Agentic AI and AI Agents: A Primer for Leaders
Vanderbilt University, Coursera, Oct 2026. **Verify**

Introduction to Deep Learning & Neural Networks with Keras
IBM, Coursera, Jul 2026. **Verify**
